

Mysilo temporary storage systems are the efficient and quick way to increase your storage capacity. Compared to traditional storage such as silos, temporary storage options are both cost-efficient and take much less time to set up. Thanks to its modular structure, it is portable and can be changed in size when desired. Suitable for seasonal storage. Can be designed according to the available space dimensions.

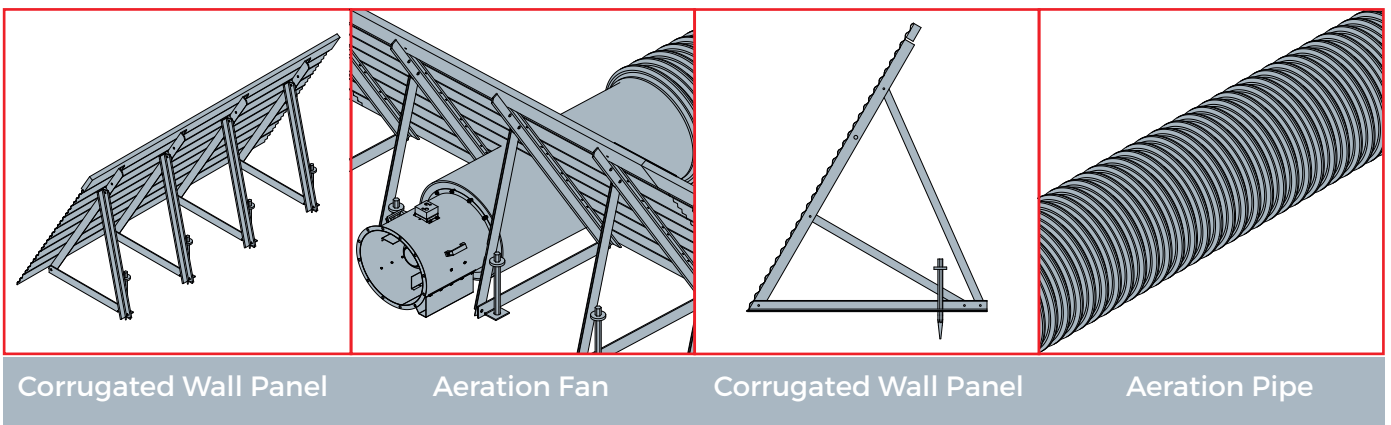

PRODUCT FEATURES

Temporary storage system includes corrugated wall panels, aeration system and tarpaulin. Corrugated wall panels play an important role in the system. Mysilo corrugated wall panels, which provide optimum air flow, are specially designed according to the needs of the system. Galvanized wall supports and wall cladding provide long-term use. The wooden blocks used in the panels are selected as materials suitable for outdoor weather conditions. The aeration system can be customized according to the products to be stored, and air flow is provided according to your needs during storage. Aeration Corrugated Pipes allow maximum air flow due to its smooth inner surface, and has high strength due to its corrugated structure. Its polyethylene raw material allows it to be highly corrosion resistant. Tarpaulins are important to protect the grain. It needs to be replaced every year at harvest time. Also, the folding of it and the covering the grain by it can be done with manpower.

OPTIONAL EQUIPMENTS:

- Aeration Fan
- Aeration Pipes
- Tarpaulin
- Spanzet Load Tension Rope

Corrugated Wall Panel

Aeration Fan

Corrugated Wall Panel

Aeration Pipe
